

Smart Cold Storage

SENSE | MONITOR | AUTOMATE

Product Brochure

Do you monitor and get notifications for change in temperature, humidity, & CO₂ that impacts your Cold Storage environment?

Do you want accountability for fluctuations in values?

Do you want to automate your Operations to reduce cost?

Passive or a schedulebased management of cold storage environment is not enough.

Sasya Smart Cold Storage measures temperature, humidity, CO₂ through sensors placed in different zones of cold storage. Data is available on mobile. Notifications are triggered to users for action.

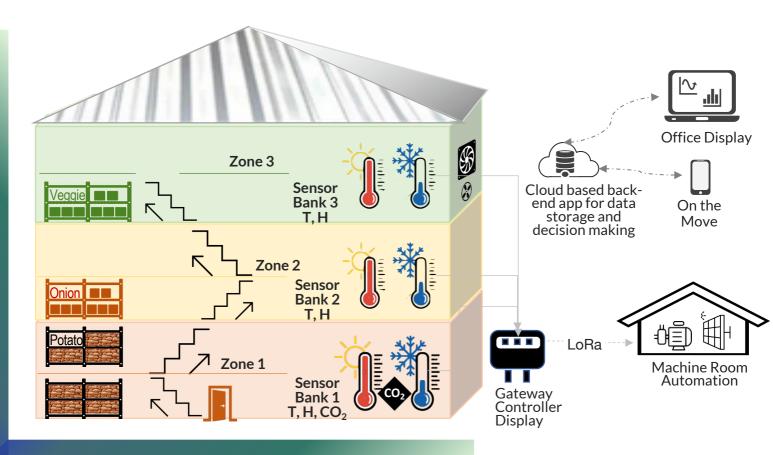

- Constant tracking of parameters & data availability for your operator and customers
- Save power & prevent machine damage due to overuse
- Prevent early ripening, starch build-up in the produce
- Use data to your advantage for higher pricing with customers

Fit Sasya Smart Cold Storage and forget about fluctuation in your Cold Storage Environment Parameters 24X7

Smart Cold Storage

Sasya Smart Cold Storage working

Highlights

IOIO Extendible Multi-Zone Sensor Banks:

Temperature, Humidity Sensor at all levels, CO₂ at ground level

9

1010

Multi Displays: Local display of parameters for the operator, office computer and mobile for 24X7 monitoring & notifications

Wireless Connectivity between Controller and Machine Room

Multiple Connectivity modes: Wifi, GSM, NB-IoT, LoRa tech

Automation (Phase 2): Multi-zone Relays for actuation of compressor, exhaust etc.

Benefits

100% Availability of data on parameters that impact

your cost & profitability

30% Saving of manual labour in

various monitoring

activities

Full Retro-fitment in existing panels for automation

Zero Recurring cost* for

Zero Recurring cost* for solution usage

Zero Cost consulting for solution design and technical support
